

1. A 25-year-old woman comes to the physician because of growths on her lips and tongue for several years. Examination shows nodules on the lips, buccal mucosa, and tongue; café au lait spots over the trunk and limbs; and scattered nodules on the skin. This patient is at greatest risk for which of the following conditions?

- ☐ A) Craniopharyngioma
- ☐ B) Ependymoma
- ☐ C) Lymphoma
- ☐ D) Optic nerve glioma
- ☐ E) Pituitary adenoma

2. A 57-year-old woman comes to the physician because of a 3-month history of gradually progressive weakness in the shoulder and hip muscles. She has hypothyroidism treated with thyroxine but is otherwise healthy. Her vital signs are within normal limits. Neurologic examination shows moderate bilateral weakness of the deltoid, biceps, triceps, psoas, glutei, and quadriceps muscles. The remainder of the examination shows no abnormalities. Her erythrocyte sedimentation rate is 85 mm/h, and serum creatine kinase activity is 2456 U/L. Complete blood count and urinalysis are within normal limits. Which of the following is the most appropriate next step in diagnosis?
- ☐ A) Quantitative sensory testing
 - ☐ B) Electromyography and nerve conduction studies
 - ☐ C) MRI of the spinal cord
 - ☐ D) Skin biopsy
 - ☐ E) Lumbar puncture

50. A previously healthy 24-year-old woman is brought to the emergency department by her brother 1 hour after a generalized tonic-clonic seizure that lasted 5 minutes. The patient and her brother emigrated from Central America 6 months ago. She takes no medications. She is drowsy but cooperative. Her temperature is 37.1°C (98.8°F), pulse is 80/min, respirations are 18/min, and blood pressure is 150/90 mm Hg. Examination and laboratory studies show no other abnormalities. Toxicology screening is negative. A CT scan of the head with contrast is shown. Which of the following is the most likely diagnosis?

- ☐ A) Behçet syndrome
- ☐ B) Central nervous system lymphoma
- ☐ C) Metastatic carcinoma
- ☐ D) Neurocysticercosis
- ☐ E) Progressive multifocal leukoencephalopathy
- ☐ F) Toxoplasmosis
- ☐ G) Tuberculous meningitis
